

HAPPY
EASTER

Challenge question

A car's odometer shows 15951 miles, a palindromic number. What is the minimum number of miles you would need to travel to form the next palindrome?

Exponents & Divisibility

Exponents

Everyone pick a two numbers, any
two numbers!

Write one number down on a piece of paper and write the other number smaller in the upper right corner of the number.

Why do we use exponents?

01

**Abbreviate
math**

02

**Write
really big
numbers**

03

**Write really
small
numbers**

What is an exponent?

Remember how you learned multiplication...

$$7 \times 2 = 7+7$$

Let's try some examples!

What is 9^3 ?

What is 7^4 ?

What is 10^8 ?

What is 2^{10} ?

Exponents have
special rules

What do you think happens if you do:

$$3^2 \times 3^4?$$

There are 8 rules with exponents!

$$3^4 \div 3^2 =$$

Quotient Rule

$$[4 \times 2]^3$$

Power of a Product Rule

01

02

03

04

Product Rule

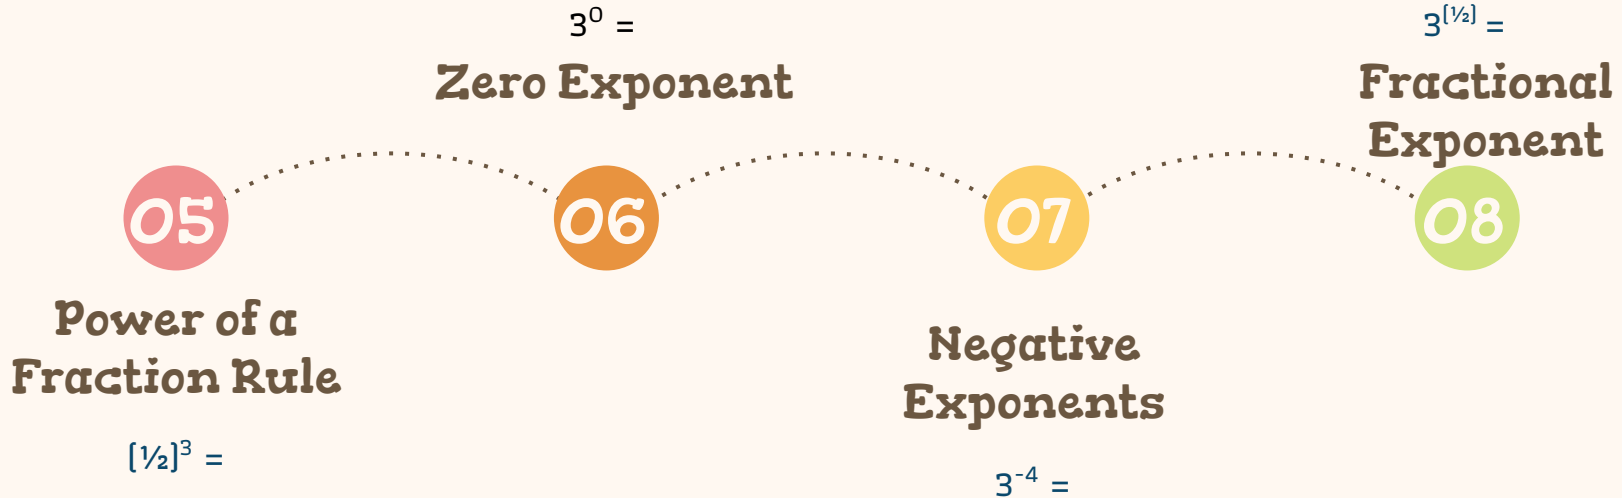

$$3^2 \times 3^4 =$$

Power Rule

$$[3^4]^2 =$$

There are 8 rules with exponents!

That was a lot! Let's practice some of the rules!

$$2^4 \times 2^8 =$$

$$2^8 \div 2^4 =$$

$$2^8 \times 2^{-4} =$$

Four friends are collecting Easter eggs...

Bob

Has 2^4 eggs!

Bobalina

Has 2^3 eggs!

George

Has 3^3 eggs!

Georgalina

Has 3^2 eggs.

Do Bob and Bobalina have more or eggs or do
George and Georgalina have more eggs?

Perfect squares!

Numbers that are
itself times itself.

Here are some
examples:

$$1 = 1 \times 1$$

$$4 = 2 \times 2$$

$$9 = 3 \times 3$$

Here's a tricky question:

Which of the following numbers is not a perfect square?

- (A) 1^{2016} (B) 2^{2017} (C) 3^{2018} (D) 4^{2019} (E) 5^{2020}

Last question!

I want a number of Easter eggs which is a perfect square. I want no more than 50, but more than 3 dozen eggs. How many eggs must I collect?

Which egg is your favorite?

#1

#2

#3

Divisibility

What happens if you do...

$3 \div 2$

$22 \div 4$

$100 \div 3$

$25 \div 7$

Divisibility

Means a number goes into another number with no remainder

There are a few divisibility rules...

Twos

Last number is even.

Threes

Digits add to a multiple of three

Fours

Last two digits are divisible by four

Fives

End in a five or a zero

How many of these numbers are divisible by three?

123

289

3892

2387

89

9796

348238

2348

27

3

234

978376

Here are some friends!

CINNAMON

FLOPSY

SPRINGS

They want to run a few miles because they have eaten so much sugar and have plenty of energy! A mile is four laps around the track. They want to finish after running a whole number of miles.

Which number of laps would allow them to achieve this goal?

- a. 720 b. 455 c. 22 d. 97 e. 86

Challenge Problem!

What is the least prime number this is
a divisor of N?

$$N = [13 \times 17] + [19 \times 23]$$
