

## Lesson 6 The Grand Review

### Order of Operations

- Remember the acronym PEMDAS? This is the order that you do operations in.

### Fractions

- Remember that when you add and subtract fraction you must change to a common denominator first

## Probability

- The likelihood of an event happening
- The number in the top, the numerator is the number of ways something can happen within the given condition
- The number on the bottom, the denominator is the total number of cases

## Perimeter and Area

- Perimeter is the distance around the entire figure, like the border
- What are some of the formulas we covered to find area?

## Prime and Composite Numbers

- Prime numbers only have two factors, one and themselves
- Composite number have three or more factors
- Integers are any whole number other than 0.
- How do we find GCF and LCM?
